

KB2040 exposes one USB-C female header.

When the USB-C header is connected into a power source, the VBUS power line connected to the Powerboost 1000C charges the battery. When the USB-C header is plugged into a host, the onboard keyboard is a host input device.

When the USB-C connector is not plugged in, the KB2040 is powered from the RPiZero's output 3.3V power line.
